Monitors AnyWhere

Game Changer for Digital Signage Connectivity

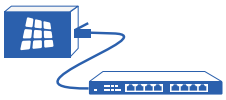

- Forget about having to install a PC for each display screen
- Dump the cumbersome and expensive infrastructure
- Utilize **HDMI over LAN** technology
- Create eye catching **Video Walls** with ease! New

One standard computer, HDMI over LAN zero clients, and the Wired or Wireless Local Area Network is all you need for **Monitors AnyWhere**.

How does it work?

1. Plug
the Zero Client device to the TV, either by HDMI or VGA cable

2. Connect
the Zero Client to your existing network switch

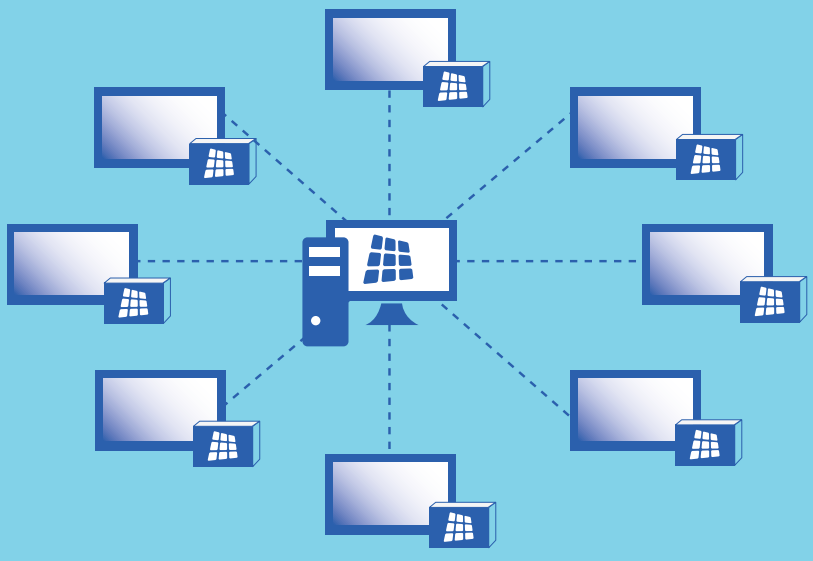

3. Install
Monitors AnyWhere software on your PC

4. Start
controlling the content on your TV screens with MonitorsAnyWhere

- **Easy to use**
- **Cost effective**
- **Powerful**
- **Dynamic**

Using Monitors AnyWhere – from a single PC – you:

- Creat and Control as many as **20 different content channels or Video Walls!**
- Configure the content to broadcast to each individual monitor.
- Work on a user-friendly application to plan and define all digital signage in your establishment.
- Gain the **Lowest TCO** in the industry for your digital signage infrastructure.
- **Green Solution** – Major savings in electricity

For each screen you can assign the following features:

- Run a different video
- Open a different website
- Run a different PowerPoint presentation
- Run any type of file or application
- Plan a playlist of applications and schedule it
- Group screens and mirror the same content
- Group screens and create eye catching Video Walls

Our solution is perfect for:

- Corporate Communications
- Manufacturing lines
- Education
- Hospitality
- Health Care

Short list of our customers:

- Marriott
- Boeing
- Honeywell
- Corona
